William Struve

747-206-8550 | wstruve.tech@gmail.com | linkedin.com/in/wstruve | github.com/struv

Software developer with experience building and supporting web applications, inventory tools, and operational dashboards. Built patient intake and inventory systems used across 25 clinics, working directly with stakeholders to define requirements, launch features, and train staff.

Education

University of California, Riverside — Riverside, CA
Bachelor of Science in Computer Science — *Aug 2024*

Technical Skills

Languages: JavaScript, Python, SQL, HTML/CSS
Frameworks and web: React, Next.js, Node.js, Flask, WebSockets
Tools and platforms: Git, Vercel, AWS, Excel, Claude Code, Codex
Personal infrastructure: Docker (Pi-hole setup)

Experience

Jr. Software Developer — Oct 2024 - Oct 2026
Kids & Teens Medical Group — *La Canada Flintridge, CA*

- Built and launched Modulo, a patient intake and communications platform adopted across 25 clinics by October 2026, replacing NexHealth, a service costing over $10,000 per month.
- Supported 115 monthly active staff accounts, 3,847 completed form packets, and 24,039 outbound SMS transmissions through Modulo in September 2026.
- Defined intake and outreach requirements, trained regional managers and senior staff, and coordinated application maintenance with another developer.
- Built and maintained Vax-inv, an Excel-backed vaccine inventory application with recorded inventory activity across 21 documented clinics in September 2026.
- Partnered with the reconciliation lead to define requirements and test inventory-to-Excel workflows; added entry duplication and in-app location onboarding.
- Built interactive dashboards for transfer reporting and scheduling capacity, helping management review reports and staff identify locations needing appointments.

Web Development Intern — May 2022 - Sep 2023
Lepow International — *Walnut, CA*

- Updated WordPress and Elementor pages and maintained site content.

Projects

MediCAL Billing Application | *Python, JavaScript, Flask, OpenCV, Pytesseract* — Jul 2024 - Aug 2024

- Led a four-person team, selected the technology stack, and wrote most of the application code, including OCR integration.
- Used OpenCV for image preprocessing and alignment with Pytesseract/Tesseract to extract fields from completed paper EBO forms into CSV; worked with a dedicated testing teammate to check outputs.

Live Chatroom | *JavaScript, Node.js, Express, WebSockets* — May 2024 - Jun 2024

- Built a browser-based chatroom with a teammate for a college web development course, using WebSockets for real-time messaging.
